

Coolflex Standard

ARM

Compression Level

20-40mmHg

Features

The Coolflex Standard Arm is ideal for individuals managing lymphedema following mastectomy or other surgical intervention. The garment is made of a lightweight, cooling material that transfers heat and releases moisture away from the skin, leaving it cool and dry. The Coolflex material has two layers which gives it a padded or cushioned feel and helps to protect and support the limb.

The product has key design features such as the interior donning sleeve and loops, that make the Coolflex Standard Arm easy for the wearer to apply and remove independently. Other features include an accordion-like or pleated elbow, which encourage a full range of motion and provides comfort for all-day wear. It also features a band system with hook closures that are easy to grip and apply.

Pair the Coolflex Standard Arm with the Dorsal Pocket Glove for compression to the hand.

This product is patent pending.

Ideal for

- Lymphedema (Stage I and II)
- Post-surgical edema
- Non-specific edema

Includes

- Coolflex Standard Arm
- 1 Pair of non-compressive Cotton Liners
