Introducing the Levitate Running Blade Soles: Running soles for urban and outdoor environments

overview

The Levitate **Running Soles** are designed for activities in both urban and outdoor environments, providing the user with all the support and grip they need to perform at their very best.

Designed in Denmark, the direct-injected TPU and PU makes the Levitate soles extremely durable while the TPU ensures a comfortable experience for the everyday athlete. The Levitate Running soles deliver all the stability you need for running through city landscapes or along outdoor trails.

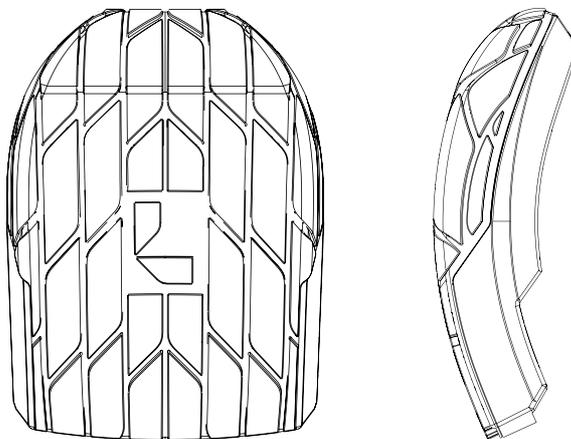

- **For all sports and surroundings:** The Essential sole is designed for indoor and urban usage where extra grip holds no value, while the Gravel sole is perfect for outdoor activities and trail runs. Every running blade comes with an orange Essential sole already attached to the blade. Both soles fit all blade sizes and categories.
- **Easy to change:** The soles are attached to the running blades with 2 buttonhead screws and 2 sealing discs. The screws are loosened and tightened with a 2.5 mm Allen key which also comes with the Running Soles and the Levitate Blade Kit.
- **Color variety:** Both soles come in 4 colors, allowing the user to choose a style that matches their existing running shoes.
