

Tamarack Prosthetic Sleeve Protector

The Ultimate Buffer Between Sleeve, Skin & Brim

The Tamarack Prosthetic Sleeve Protector is a low-profile accessory worn directly under a vacuum suspension sleeve. Utilizing coated GlideWear™ fabric technology, it protects the outer sleeve at the knee and socket brim while reducing the shear forces that contribute to skin breakdown — extending suspension sleeve life and improving all-day comfort.

 Tamarack

✓ Zero Bulk, True Seal

A polyurethane coating on the patented GlideWear™ fabric helps the outer sleeve maintain its airtight vacuum seal — without adding bulk that affects socket fit.

✓ Reduces Skin Shear

The silky, ultra-low friction stretch blend (85% nylon / 15% spandex) protects skin from the rubbing and pinching that lead to uncomfortable, damaging breakdown.

✓ Shields the Brim

Stops severe abrasion between the socket brim and suspension sleeve when the knee is bent — dramatically increasing comfort and extending sleeve lifespan.

✓ Durable, Low-Maintenance

High-performance materials and construction withstand the demands of daily use, athletic activity, and repeated machine washing.

“It has prevented my sleeve from getting pin holes from my [socket] trimline without needing to reflect my sock or adding an additional stockinette.” —Bryson M. Below-Knee Amputee

“It is easy to don and it seemed to make the suspension sleeve last longer than usual for the patient I have using it.”

—Jennifer Pudlo, CPO Certified Prosthetist Orthotist
