

# Abduction Shoulder Sling

**DCT-70ABD** The Trend Abduction Shoulder Sling is an upper extremity orthosis designed for post-operative shoulder immobilization. It features an adjustable platform that can be modified to provide optimal support and relief throughout all stages of healing. The TX2 Breathe Thru Mesh, quick-release buckles, anti-migration thumb rest, and padded neck strap enhance wearability and patient comfort.

## **Dual quick-release**

The dual quick-release feature allows for effortless application and removal of the sling, enhancing convenience for both patients and caregivers. It ensures the sling remains secure during use while providing the flexibility to quickly adjust or take off

## **Highlights**

- Provides post-operative and injury immobilization
- Clinically tested to provide post-operative and injury support
- Adjustable immobilization Platform
- TX2 Breathe Thru Mesh Sling with padded neck support create a cool and comfortable healing environment
- Features a Ambidextrous Design to enhance convenience for all

## **Indications**

- Post-operative
- Shoulder injuries or instabilities
- Arthroscopic repair
- Capsular shifts
- Glenohumeral dislocations and subluxation

## **Anti-migration thumb rest**

Prevents movement, ensuring consistent positioning. This feature enhances stability and support by keeping the arm securely aligned.

**PDAC Approved: L3670**
